Agility — four tools every salesperson should be using

Inventory Lookup · Quote Follow-Up · Payments · Spec Packages — all live on agility.wilsonappliance.com, all on your phone. Sign in with your Wilson email.

Inventory Lookup

WHERE

Sales Tools → Inventory Lookup. Works on your phone — tap a card to open the drawer.

HOW TO USE IT

- Filter by NetSuite category / class / subclass, or type a model, brand or description (contains / starts with / ends with). Tick **ATS only** to see only what you can promise today. Sort by price if the client has a budget.
- **ATS** = units you can sell right now: regular stock, not written to anyone. Open-box units count as sellable; **display units do not** — tap **Ask the GM to sell** and the GM gets a flag and an email, then answers you directly.
- Prices shown are ePASS **L1** and **Retail**, plus the maker's floor (SZ-UMRP, WOLF-UMRP…) where that is the only price. No cost or margin on this screen — it is safe to look at with a client beside you.
- Drawer: every unit with its status. **Likely available** = written to an order delivering more than 60 days out — check with that salesperson first. The last-12-months tile shows written vs delivered.
- Miele shows the model name (G 7216 SCU) with the item number in small print.

TELL THE CLIENT

"I have N in the warehouse right now" — use the ATS number, never the on-hand number.

Quote Follow-Up

WHERE

Sales Tools → Quote Follow-Up. Fed automatically from ePASS open quotes and finished orders.

HOW TO USE IT

- Every open ePASS quote that hasn't become a sale is an **opportunity card**. Quotes for the same client within 30 days share a card; use **Split card** when a builder or designer has several projects going.
- **To Work** is your queue. On each card: record a conversion the feed missed (enter the sales order), **queue a follow-up** with a date, or mark it **Lost** with a reason. Follow-ups you queue appear under **Follow-Up Queue** on their day.
- A finished order for the same customer and salesperson moves the card to **Converted** on its own. Quote 2s resolve themselves — you never need to touch them.
- **Brands** filter: see every card with a Sub-Zero (or any brand) on the quote, with dollars quoted. **Scoreboard** charts direct sales, conversions and open pipeline per consultant for the date range.

TELL THE CLIENT

A follow-up call that starts with "I was reviewing the quote we built for your kitchen on the 14th…" — the card has the models, the dollars and the date.

Payments — every way to take money

WHERE

Home → Payments. All four run through Stripe; receipts, refunds and payouts flow to Accounting automatically.

HOW TO USE IT

- **Send Payment Link** — scan the sales-order PDF and the form fills itself, or type it. Choose *One-Time Payment*, *Deposit Agreement* (collects 50% now, saves the card for the balance), or *Save Card — No Charge*. Text it, email it, or copy the link. Flip **ACH Only Link** on when the client must pay by bank account (no card option; 3–5 business days to clear).
- **Send To Card Reader** — same scanner, then pick the reader; the client taps or inserts in the showroom. Confirmation copies to your clipboard.
- **Charge A Saved Card** — for a card captured earlier or a deposit-agreement balance. Open it from **Deposit Agreements** and the balance pre-fills. If the bank declines, the screen tells you why in plain words and what to do next — don't retry a hard decline; send a payment link instead.
- **Deposit Agreements** — every open deposit with what's paid and what's still due, and the one-click balance charge when the job finishes.

TELL THE CLIENT

"I'll text you a secure Wilson payment link — it comes from Stripe, you'll see our name, and you'll get a receipt by email the moment it goes through."

Spec Packages

WHERE

Sales Tools → Spec Packages. Steel Cod builds the PDFs; Agility sends them.

HOW TO USE IT

- Scan the quote or sales order and the models, client and order number fill in; group models into rooms if it helps the client. Choose **slim** or **full** specs and whether to merge the ePASS quote into the front or back of the package.
- **Curate**: untick anything that doesn't belong (use & care guides, other languages) — the PDFs rebuild instantly.
- **Review & send**: **Email** (to the client, yourself, both, or any address, with the attachments you tick) or **Text** through Podium (sends the public Steel Cod link — full, slim, or the Customer Q&A page; replies land in Podium).
- **Quick Send** uses the standard note — "Hi Jane, this is Sam with Wilson AC & Appliance. Here are the spec sheets for your project at 412 Oak St." **Custom message** lets you rewrite it; **See template** shows the standard wording. Nothing goes out until you press send.

TELL THE CLIENT

"I'm sending the full spec sheets for everything on your quote so your contractor has the cutouts and electrical before we deliver."
